Jamb Connection Supplement

- 1. All doors tested for uniform static air pressure per DASMA 108 to test pressure of 1.5 x design pressure
- 2. Also tested for large missle impact and cyclic wind pressure per ANSI/DASMA 115
- 3. FBC Florida Building Commission, TDI Texas Department of Insurance
- 4. Above wind speeds based on ASCE 7-05 are applicable for doors installed on buildings with roof slope ≤ 10°. Wind speeds also applicable only to enclosed structures with an importance factor of 1.0 and assume a maximum of 2' of the door is located within the end zone of a structure. Consult a registered Architect or Structural Engineer for applicability for other project specific conditions.
- 5. Above wind speeds based on ASCE 7-10 Category II structure with a maximum of 2' of the door is located within the end zone of a structure and a roof slope ≤ 10°. Consult a registered Architect or Structural Engineer for applicability for other project specific conditions.
- 6. Aluminum full view section may replace any section except top and bottom panels
- 7. Glazing is not impact resistant and does not meet the requirements for Wind-Borne Debris Regions
- 8. Option code 2150 only available in models TS 200 and TS 200-20
- 9. 2" track maybe limited due to balance weight
- 10. Low Head Room track is not available.
- 11. Wind speeds listed in this guide are provided for reference purposes only. In ALL cases the local building authority is the sole and final determiner of the structural and safety requirements, and suitability of the garage door.
